Everything you need to know about LTE and wireless broadband.

Telkom has 3G, LTE and LTE-Advanced (LTE-A) wireless broadband technology, and your home or office location will determine the type of broadband coverage/infrastructure currently available to you. Go to http://www.telkom.co.za/coverage to stay up to date with the technology upgrades in your area.

Why you should get LTE at home
You can wirelessly connect multiple devices such as smartphones, tablets, smart TVs and laptops simultaneously on one internet connection.

Wireless plug-and-play
Once you have established that you fall within LTE/LTE-A coverage, get hold of one of our LTE/LTE-A routers and insert an activated SIM card for a fast plug-and-play setup. No configuration is required to get connected – same-day service, no installation fees.

Speed
There are many factors that can affect wireless LTE connection speeds. These include signal strength, the number of users, the type of hardware/software and router being used, the speed of the content being accessed, as well as physical obstructions such as buildings, trees or walls between the router and our network.

Reliability
• LTE provides home users with a stable wireless broadband connection.
• LTE has reliable connectivity 24 hours a day.

Network upgrades and quality
Telkom operates a world-class LTE network with the biggest LTE capacity available. We constantly monitor our network performance on a nationwide basis and upgrade when required.

Coverage and support
With nationwide coverage, a dedicated call centre of LTE gurus and a quick, simple setup, Telkom LTE is the best wireless deal in SA.
